

Generative AI for Workplace Productivity & Business Automation

2 DAYS • 16 HOURS • HANDS-ON • BEGINNER FRIENDLY • NO CODING REQUIRED

RM2,500 per pax · exc. SST | **HRD CORP CLAIMABLE**

Your team is already using AI.

The opportunity is to turn scattered usage into a smarter, safer way of working.

Not another “how to use ChatGPT” class.

This programme is built around the work employees actually do: writing, research, meetings, presentations, spreadsheets, documentation, decision support and repetitive business processes.

Participants learn to use modern Generative AI tools with better prompting, stronger judgement and responsible data practices.

HR / FINANCE / SALES / MARKETING / OPERATIONS / MANAGEMENT

THE SHIFT THIS PROGRAMME BUILDS

**From one-off prompts →
to reusable AI-assisted ways of working**

The goal is for employees to return to work with practical prompts, use cases and workflows they can apply immediately — while understanding where AI requires human review.

What could your team do differently on Monday?

45 minutes drafting an important email	→ Create a strong first draft and refine tone and accuracy
Reading a 30-page report	→ Extract decisions, risks, questions and action points
Starting a presentation from a blank slide	→ Develop the storyline, structure and talking points
Manually organising meeting notes	→ Generate actions, owners, deadlines and follow-ups
Struggling with spreadsheet formulas	→ Develop, explain and troubleshoot formulas with AI assistance
Starting an SOP from scratch	→ Build a structured first draft for human review
Repeating similar customer responses	→ Develop reusable response frameworks without sounding robotic
Hours of initial research	→ Research, compare and synthesise information faster
Random prompting with inconsistent results	→ Use professional, reusable prompt frameworks
Repeating the same process every week	→ Identify opportunities for AI-assisted workflows

PROGRAMME BALANCE

CONCEPT VS. PRACTICAL

30% concept, 70% practical. Hands-on exercises · department scenarios · prompt building · workflow design · responsible-AI decisions.

This is about productivity and transformation — not a list of course modules.

What they will actually learn

UNDERSTAND → PROMPT → APPLY → ANALYSE → AUTOMATE → GOVERN

01

Understand AI

Generative AI and LLMs in plain business language; capabilities, limitations, hallucinations and human judgement.

02

Prompt Professionally

Context, objective, audience, examples, constraints, output formats, iteration and reusable prompt structures.

03

Work Faster

Emails, reports, proposals, presentations, meetings, summaries, research, SOPs and business documentation.

04

Apply AI by Department

Practical applications for HR, Finance, Sales, Marketing, Operations, Administration, Customer Service and Management.

05

Work With Data

Interpret tables, support spreadsheet work, develop formulas, identify patterns and translate information into business insight.

06

Design AI-Assisted Workflows

Identify repetitive work and map: Input → AI Assistance → Human Review → Output.

07

Use AI Responsibly

Confidential information, personal and customer data, intellectual property, bias, hallucinations, verification and organisational governance.

08

Build Your AI Toolkit

Participants create role-specific reusable prompts, practical use cases and an AI-assisted workflow to take back to work.

WHAT PARTICIPANTS LEAVE WITH

- Personal AI prompt library
- Reusable workplace prompt frameworks
- Responsible-AI verification checklist
- Department-specific AI use cases
- One AI-assisted workflow
- Practical techniques usable immediately

CUSTOMISABLE FOR YOUR ORGANISATION

The programme can be delivered organisation-wide or customised for individual departments, with client-specific exercises built around your own tools, terminology and business scenarios.
